

What is powder filling machine ?

2. What is powder filling machine ?

■ What is filling machine ?

Filling machine is that fills containers such as bags, bottles and jars with contents. There are various types of filling machines that can handle liquids, viscous materials, powders, and granules.

In here, we introduce auger filling machine for powder product that TAM designs.

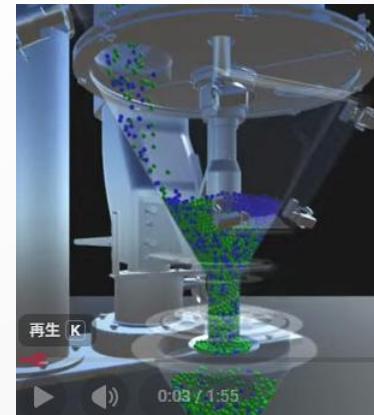

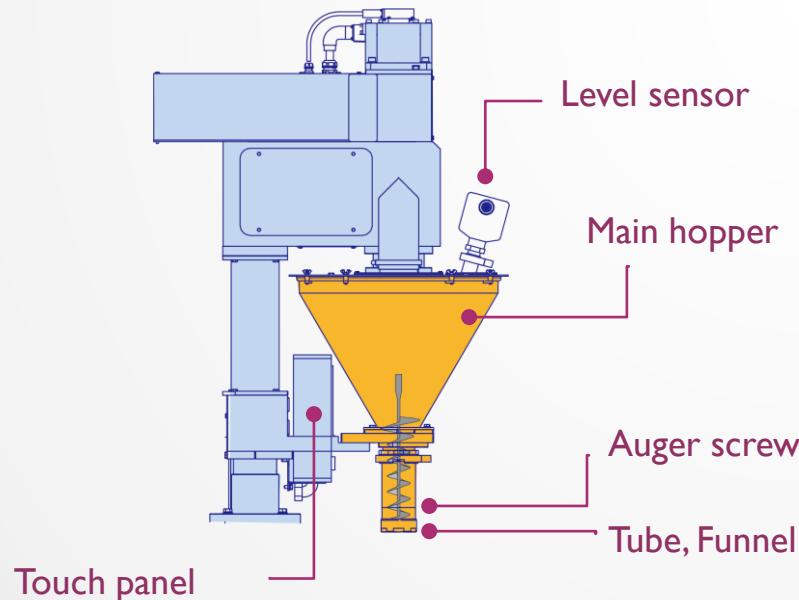

2.What is powder filling machine ?

■ Auger filling machine

TAM Auger filler is designed for filling powder and granules. In Auger filling, the amount of contents are controlled and pushed out by auger rotation. One of the advantages of using auger filler is to prevent powder flying as the distance from the screw end to the fall point can be shortened.

Auger filler has a simple structure. It is easy for maintenance as the contact part with powder can be washed down.
