

Product can be packaged by VFFS machine

Frozen food

Chips

Noodle

Candy (wrapped)

Cookies

Coffee beans

Nuts

Precut vegetable

Product can be packaged by VFFS machine

Due to free-fall under its own gravity, the supplied batch tends to fall together to some extent. Therefore, VFFS is suitable for packing solid products, as well as granular and powdered products. On the contrary, for such products those shape are changed by fall, VFFS is not the best way to pack. If packed product volume is heavy, it has to be protected from fall impact by equipping optional devices.

Coffee beans

Product can be packaged by VFFS machine

Powder or granule products can be also packed by combination of Auger filler and VFFS machine. The packaging process can be automated and operated with an integrated touch panel.

Auger filler controls the filling volume by auger rotation. One of the advantages of using auger filler is **to prevent powder flying** as the distance from the auger screw end to the fall point can be shorten. Auger filler is simple structure and easy for maintenance.
